

UNIT 10 ELECTRICITY

Vocabulary to study

Name _____

circuit	A path along which electric charges flow
conductor	A material through which electricity travels easily
electric current	The flow of electric charges along a path
electric motor	A device that changes electrical energy into mechanical energy
generator	A device that produces an electric current by converting mechanical energy to electrical energy
insulator	A material that resists the movement of electricity through it
magnet	An object that attracts iron and a few other metals
static electricity	The buildup of electric charges on an object
